Subject: Reynolds Questions

I had some questions on the end phase here and timing.

Are you using the DEQ E&ES format for institutional controls?

My understanding is we would use E&ES - I don't know if the current version has been put in that format yet or not

Who will be the grantee for the E&ES?

I'll need to check on that - will get back to you

What is the timeline for the E&ES?

We don't have a schedule, but I know Alcoa would like to have it wrapped up by the end of December.

Has the lawsuit between US gov and Reynolds or Alcoa been settled?

Yes

What is the status of the ROD?

I'll be sending it out for review today

What is the status of the focused extraction well problem?

RMC is replacing the pump, and it could be back online by the end of next week. They sent samples to a lab to evaluate biofouling & general chemistry and are waiting for those results. Steve said they also want to change some of the piping to allow easier cleaning of the flow tube, which is also 70% plugged & needs to be replaced.

We had some meetings today and some questions came up so I hoped you could answer them. I will be out from now until Monday morning.
